T-SQL static code analysis

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your T-SQL code

- All rules 80
-  Vulnerability 1
-  Bug 16
-  Security Hotspot 4
-  Code Smell 59

Tags 

Search by name... 

Unused labels should be removed		Code Smell
Using hardcoded IP addresses is security-sensitive		Security Hotspot
Column references should not have more than two-parts		Code Smell
Triggers should not "PRINT", "SELECT", or "FETCH"		Code Smell
"LIKE" clauses should not be used without wildcards		Code Smell
Jump statements should not be redundant		Code Smell
"CATCH" clauses should do more than rethrow		Code Smell
Boolean checks should not be inverted		Code Smell
Multiple variables should not be declared on the same line		Code Smell
Unused local variables should be removed		Code Smell
Local variable and parameter names should comply with a naming convention		Code Smell
Empty statements should be removed		

Unused labels should be removed

 Code Smell  Major   unused

If a label is declared but not used in the program, it can be considered as dead code and should therefore be removed.

This will improve maintainability as developers will not wonder what this label is used for.

Noncompliant Code Example

```
label: -- Noncompliant
    PRINT 'hello world';
GO
```

Compliant Solution

```
PRINT 'hello world';
GO
```
