

# Oracle Database Service for Azure Features

- Overview
- Features
- FAQ

## Features topics

- Guided deployment
- Database service management
- Metrics and events in Azure
- Direct, low-latency connectivity
- Private, fault-tolerant interconnection
- Zero-cost service
- Collaborative support

## Guided deployment

Set up automation streamlines linking cloud accounts, connecting virtual networks, and federating identity across OCI and Azure.

## Database service management

A familiar, Azure-like portal simplifies management of Oracle Database from Azure.

## Metrics and events in Azure

Each database can be monitored using a dashboard. Database metrics are streamed to Azure Application Insights, and database events are provided to Log Analytics.

## Direct, low-latency connectivity

[Oracle Interconnect for Microsoft Azure](#) provides latency of less than two milliseconds with no intermediaries required.

## Private, fault-tolerant interconnection

The service leverages private, redundant network links.

## Zero-cost service

Oracle Database Service for Azure is offered at no additional cost. There are no charges for the Interconnect ports or data ingress/egress over the Interconnect. You will be billed normally for consumption of Oracle Database services, such as Autonomous Database.

## Collaborative support

Oracle and Microsoft provide collaborative support for troubleshooting and resolving issues.
