 Code Smell
<div>Duplicate values should not be passed as arguments</div> <div></div>
<div>Track parsing failures</div> <div></div>
<div>Functions and stored procedure should not have too many lines of code</div> <div></div>
<div>Track uses of "NOSONAR" comments</div> <div></div>
<div>Statements should be on separate lines</div> <div></div>
<div>"WHEN" clauses should not have too many lines of code</div> <div></div>
<div>Files should not have too many lines of code</div> <div></div>
<div>Lines should not be too long</div> <div></div>
<div>Reserved keywords should not be used as identifiers or object names</div> <div></div>
<div>Non-standard comparison operators should not be used</div> <div></div>
<div>Tabulation characters should not be used</div> <div></div>

Duplicate values should not be passed as arguments

Analyze your code

 Code Smell  Major 

There are valid cases for passing a variable multiple times into the same function or procedure call, but usually doing so is a mistake, and something else was intended for one of the arguments.

Noncompliant Code Example

```
SET @result = dbo.MyAdd(@val1, @val1) -- Noncompliant
```

Compliant Solution

```
SET @result = dbo.MyAdd(@val1, @val2)
```

Deprecated

This rule is deprecated, and will eventually be removed.
