Jump statements should not be redundant

Analyze your code

 Code Smell

 Minor 

 redundant clumsy

Jump statements, such as RETURN and CONTINUE let you change the default flow of program execution, but jump statements that direct the control flow to the original direction are just a waste of keystrokes.

Noncompliant Code Example

```
CREATE PROCEDURE print_numbers AS
BEGIN
    FOR i in 1..4 LOOP
        DBMS_OUTPUT.PUT_LINE(i);
        CONTINUE; -- Noncompliant
    END LOOP;
    RETURN;      -- Noncompliant
END;
```

Compliant Solution

```
CREATE PROCEDURE print_numbers AS
BEGIN
    FOR i in 1..4 LOOP
        DBMS_OUTPUT.PUT_LINE(i);
    END LOOP;
END;
```
