"CREATE OR REPLACE" should be used instead of "CREATE"
Analyze your code
Code Smell
 Critical

- bad-practice

When creating a function, procedure, package, package body, type, type body, trigger or library, it is a good practice replace the existing one to avoid errors.

Noncompliant Code Example

```
CREATE FUNCTION my_function RETURN PLS_INTEGER AS -- Noncompliant

BEGIN

  RETURN 42;

END;

/
```

Compliant Solution

```
CREATE OR REPLACE FUNCTION my_function RETURN PLS_INTEGER AS -- Compliant, no error
even if the function already exists

BEGIN

  RETURN 42;

END;

/
```
